

EuroTraining Is facilitating the access to micro- and nanoelectronics training through a number of valuable alliances by offering the following services:

European Training Infrastructure (ETI)

The ETI directory guides you through hundreds of European micro- and nanoelectronics courses and events offered by professional training providers. It provides a full search facility which allows you to find exactly the course you want, and you can register direct on-line.

Quality Labelling

Training providers are encouraged to accredit their training with the EuroTraining Quality Label, an EU approved endorsement of high teaching standards and facilities.

Training requirements (Roadmap)

With the help of individual experts EuroTraining identifies future training requirements in micro- and nanoelectronics. The training roadmap covers industrial as well as academic training requirements.

Course materials e-fair

Stimulation of the provision of good course material fulfilling the universities requirements with respect to graduate nanoelectronics schools.

EUROTRAINING

Training services:

European Training Infrastructure offering more than 400 annual courses

Provision of market requirements and training roadmaps

Organisation of training courses in subject areas not yet covered by the market

European quality labelling scheme for continuing training courses

www.eurotraining.net

TRAINING SUPPLIERS

The European Training Infrastructure (ETI) is uniquely placed to support on one hand the training suppliers and the training users

QL

Quality measures are integrated into the EuroTraining concept, i.e. all information entered into ETI either goes through a validation check or it goes through the full Quality Labeling (QL) service.

ETI

The European Training Infrastructure maximizes the visibility and quality of the training offered across Europe. EuroTraining is continuously working with the training suppliers in order to maximize the training offer and to ensure that the right training is offered in a meaningful way (road mapping, geographic coverage, content, level, etc.).

PR

Promotion (PR) is integrated in the ETI concept. Promotion addresses the training users who are segmented in different groups having different needs.
